Learn how to conserve water, build a rain barrel

EGG HARBOR CITY – SustainableEHC, the city’s green team is hosting a Water Conservation and Rain Barrel Making Workshop 11 a.m. Saturday, May 19 at the Egg Harbor City Water Treatment Facility, 717 Philadelphia Ave.

Participants will tour the new water treatment plant, learn where their drinking water comes from, how it is treated and how to save money on utilities. A rain barrel making workshop and demonstration follows the tour.

AmeriCorps Vista Lauren Cromie has secured 12 recycled barrels and will instruct participants how to make a rain barrel for your home and garden.

All are welcome, but registration is required. Egg Harbor City residents will be priority listed to receive a free rain barrel, but everyone is invited to learn how to make a rain barrel using a clean plastic barrel and fixtures that can be purchased at a local hardware store.
